Distinct Substrings

Question 939 of 1031

< >

Medium ✓ 👍 ★ 🔗 🚩

Given a string `s`, return the number of distinct non-empty [substrings](#).

Constraints

- `0 ≤ n ≤ 1,000` where `n` is the length of `s`

Example 1

Input

`s = "aaab"`

Output

7

Explanation

We have the following distinct substrings:

- "a"
- "aa"
- "aaa"
- "aaab"
- "aab"
- "ab"
- "b"
